This document is not endorsed in anyway by Apple company. It's just a personal recompilation from Aperture documentation. Contact : jpublic@laposte.net

Sur un clavier azerty, certains raccourcis ne peuvent être accessibles qu'en les modifiant par l'intermédiaire du panneau «Clavier et souris» du module des Préférences. Ouvrez l'onglet «Raccourcis clavier», tout en bas cliquez sur «Raccourcis clavier de l'application» puis sur «+». Désignez Aperture dans le menu déroulant puis remplissez les champs comme indiqué dans l'image ci-dessous. Attention de bien respecter l'orthographe des mots.

Notes :  
Les raccourcis qui n'ont pu être «récupérés» sont indiqués d'un «?». Si vous avez une piste vous pouvez me la communiquer : jpublic@laposte.net  
Lorsqu'il y a deux touches indiquées «) or -», dans la plupart des cas la première touche se trouve sur la partie gauche du clavier, la seconde sur le pavé numérique.  
` désigne la touche « $\text{€}$ » près de la touche «entrée»
